

Money Demand Database*

Version 0.0

SEBASTIAN VELDHUIS¹ and MARTIN WAGNER^{1,2}

¹Department of Economics, University of Klagenfurt

²Institute for Advanced Studies, Vienna

August 16, 2025

Data is documented in the following table structure:

Variable	Range	Description
Name in Dataset	FirstObs–LastObs	Title; Unit Construction, Source

The description title always refers to the most recent values of the time series. That matters, if time series are consolidated, e. g., when merging ESTR with EONIA interest rates the description title would refer to ESTR.

The datasets are provided both as individual `.csv` files and as a consolidated `.xlsx` file. The `.csv` files are titled `cc_data_f.csv`, where `cc` is the two-letter country code in lowercase and `f` denotes the frequency (`m` for monthly, `q` for quarterly, or `a` for annual). Each `.csv` file uses a comma as the value separator, a dot as the decimal separator, and the first row as the header. The consolidated `.xlsx` file contains the data organized in Excel sheets titled `CC_F`, where `CC` is the two-letter country code in uppercase and `F` denotes the frequency in uppercase (`M`, `Q`, or `A`).

The monthly datasets for Australia and New Zealand are labeled with “*” to denote the absence of a monthly GDP proxy (due to the lack of monthly industrial production data) as well as the unavailability of monthly CPI data.

*The authors gratefully acknowledge financial support from the Jubiläumsfonds of the Oesterreichische Nationalbank (Grant No. 18692). We also thank Artem Barsukov and Renata Cheremnykh for carefully cross-checking this data documentation.

Part I.

Monthly Datasets

1. Australia (AU)*

Variable	Range	Description
ur	1978M02–2025M03	Unemployment rate; Percent Reserve Bank of Australia (2025 <i>m</i>)
m1	1975M02–2025M03	Monetary aggregate M1; AUD millions The following series times 1000: Reserve Bank of Australia (2025 <i>i</i>)
m3	1965M03–2025M03	Monetary aggregate M3; AUD millions The following series times 1000: Reserve Bank of Australia (2025 <i>j</i>)
bm	1976M08–2025M03	Monetary aggregate Broad money; AUD millions The following series times 1000: Reserve Bank of Australia (2025 <i>c</i>)
policy	1976M04–2024M07	Policy rate; Percent BIS (2025 <i>a</i>)
iocr_1d	1976M05–2025M04	Interbank Overnight Cash Rate; Percent Reserve Bank of Australia (2025 <i>h</i>)
bab_3m	1969M06–2025M04	3-month BABs/NCDs rates; Percent Reserve Bank of Australia (2025 <i>a</i>)
gov_10y	1969M07–2025M03	Commonwealth Government 10 year bond yields; Percent i) Since 2013M06: Reserve Bank of Australia (2025 <i>d</i>) ii) Prior to 2013M06: Reserve Bank of Australia (2025 <i>b</i>)
xjo	1992M11–2025M05	S&P/ASX 200 Monthly (simple arithmetic) averages of the following series: Yahoo! Finance (2025 <i>f</i>)

Variable	Range	Description
xao	1984M08–2025M05	S&P/ASX All Ordinaries Monthly (simple arithmetic) averages of the following series: Yahoo! Finance (2025 <i>a</i>)
reer	1994M01–2024M07	Real effective exchange rate; Index (2015 = 100) The following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>b</i>)
xr_usd	1957M01–2024M07	Exchange rate to USD; AUD per USD IMF (2025 <i>a</i>)

2. Canada (CA)

Variable	Range	Description
gdp_nom	1961M01–2024M09	(Estimated) Nominal gross domestic product (GDP); CAD millions This series has been constructed by applying Chow and Lin (1971) temporal disaggregation to gdp_nom from Section 15 using a constant and the following monthly real gdp proxy times cpi (as described below) divided by 100 as regressors: Chow and Lin (1971) temporal diagggregated series $\text{gdp_nom}/\text{gdp_defl} \cdot 100$, with gdp_nom and gdp_defl as described in Section 15, using a constant and the series OECD (2025 <i>d</i>) as regressors
gdp_defl	1961M01–2024M09	(Estimated) GDP deflator; 2015 = 100 This series has been constructed by dividing the monthly real gdp proxy described above into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100

Variable	Range	Description
cpi	1914M01–2025M02	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the annual (simple arithmetic) average in 2015 is equal to 100: i) Since 1992M01: Statistics Canada (2025<i>b</i>) ii) Prior to 1992M01: i) backdated using growth rates (previous period) of the following series after X11 seasonal adjustment: Statistics Canada (2025<i>a</i>)
ur	1976M01–2025M03	Unemployment rate; Percent Statistics Canada (2025<i>z</i>)
m1p	1975M03–2025M01	Monetary Aggregate M1+; CAD millions Statistics Canada (2025<i>e</i>)
m1pp	1968M01–2025M01	Monetary Aggregate M1++; CAD millions Statistics Canada (2025<i>f</i>)
m2p	1968M01–2025M01	Monetary Aggregate M2+; CAD millions Statistics Canada (2025<i>g</i>)
m2pp	1968M01–2025M01	Monetary Aggregate M2++; CAD millions Statistics Canada (2025<i>h</i>)
m2	1968M01–2025M01	Monetary Aggregate M2; CAD millions Statistics Canada (2025<i>i</i>)
m3	1970M01–2025M01	Monetary Aggregate M3; CAD millions Statistics Canada (2025<i>j</i>)
policy	1960M07–2024M07	Policy rate; Percent BIS (2025<i>a</i>)
ommfr_1d	1975M01–2025M03	Overnight money market financing rate; Percent Statistics Canada (2025<i>o</i>)
tb_3m	1962M01–2025M03	Treasury Bill yields, 3 month; Percent Statistics Canada (2025<i>y</i>)

Variable	Range	Description
gov_10y	1982M06–2025M03	Government of Canada benchmark bond yields, 10 years; Percent Statistics Canada (2025 <i>t</i>)
gov_long	1976M01–2025M03	Government of Canada benchmark bond yields, long term; Percent Statistics Canada (2025 <i>u</i>)
osptx	1956M01–2023M09	Standard and Poor’s/Toronto Stock Exchange Composite Index Statistics Canada (2025 <i>w</i>)
tsx60	1982M01–2023M09	Standard and Poor’s/Toronto Stock Exchange 60 Index Statistics Canada (2025 <i>v</i>)
reer	1994M01–2024M07	Real effective exchange rate; Index (2015 = 100) The following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>b</i>)
xr_usd	1957M01–2024M07	Exchange rate to USD; CAD per USD IMF (2025 <i>a</i>)

3. Denmark (DK)

Variable	Range	Description
gdp_nom	2000M01–2024M09	(Estimated) Nominal gross domestic product (GDP); DKK millions This series has been constructed by applying Chow and Lin (1971) temporal disaggregation to gdp_nom from Section 16 using a constant and the following monthly real gdp proxy times cpi (as described below) divided by 100 as regressors: Chow and Lin (1971) temporal diagggregated series $\text{gdp_nom}/\text{gdp_defl} \cdot 100$, with gdp_nom and gdp_defl as described in Section 16, using a constant and the series Eurostat (2025<i>f</i>) as regressors
gdp_defl	2000M01–2024M09	(Estimated) GDP deflator; 2015 = 100 This series has been constructed by dividing the monthly real gdp proxy described above into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100
cpi	1980M01–2024M07	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series, such that the annual (simple arithmetic) average in 2015 is equal to 100: Statistics Denmark (2025)
ur	1983M01–2025M02	Unemployment rate; Percent Eurostat (2025<i>j</i>)
m1	1991M01–2024M06	Monetary aggregate M1; DKK millions The following series after being seasonally adjusted using the X11 procedure: i) Since 2003M01: Danmarks Nationalbank (2025<i>a</i>) ii) Prior to 2003M01: i) backdated using growth rates (previous period) of IMF (2025<i>i</i>)

Variable	Range	Description
m2	1991M01–2024M06	Monetary aggregate M2; DKK millions The following series after being seasonally adjusted using the X11 procedure: i) Since 2003M01: Danmarks Nationalbank (2025<i>b</i>) ii) Prior to 2003M01: i) backdated using growth rates (previous period) of IMF (2025<i>j</i>)
m3	1981M01–2024M06	Monetary aggregate M3; DKK millions The following series after being seasonally adjusted using the X11 procedure: i) Since 2003M01: Danmarks Nationalbank (2025<i>c</i>) ii) Prior to 2003M01: i) backdated using growth rates (previous period) of IMF (2025<i>k</i>)
policy	1946M01–2024M07	Policy rate; Percent BIS (2025<i>a</i>)
ibr_3m	1988M06–2025M02	Denmark interbank 3m delayed; Percent ECB Data Portal (2025<i>d</i>)
gov_10y	1983M05–2025M02	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Danish krone; Percent ECB Data Portal (2025<i>q</i>)
reer	1994M01–2024M07	Real effective exchange rate; Index (2015 = 100) The following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025<i>b</i>)
xr_usd	1957M01–2024M07	Exchange rate to USD; DKK per USD IMF (2025<i>a</i>)

4. Japan (JP)

Variable	Range	Description
gdp_nom	1970M01–2024M09	(Estimated) Nominal gross domestic product (GDP); JPY millions This series has been constructed by applying Chow and Lin (1971) temporal disaggregation to gdp_nom from Section 17 using a constant and the following monthly real gdp proxy times cpi (as described below) divided by 100 as regressors: Chow and Lin (1971) temporal diagggregated series $\text{gdp_nom}/\text{gdp_defl} \cdot 100$, with gdp_nom and gdp_defl as described in Section 17, using a constant and the series OECD (2025<i>d</i>) as regressors
gdp_defl	1970M01–2024M09	(Estimated) GDP deflator; 2015 = 100 This series has been constructed by dividing the monthly real gdp proxy described above into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100
cpi	1970M01–2025M02	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the annual (simple arithmetic) average in 2015 is equal to 100: i) Since 2010M01: e-Stat (2025<i>b</i>) ii) Prior to 2010M01: i) backdated using growth rates (previous period) of the following series after X11 seasonal adjustment: e-Stat (2025<i>a</i>)
ur	1953M01–2025M02	Unemployment rate; Percent e-Stat (2025<i>c</i>)
m1	1964M01–2025M02	Monetary aggregate M1; JPY millions The following series times 100 after X11 seasonal

Variable	Range	Description
		adjustment: i) Since 2003M04: Bank of Japan (2025 <i>d</i>) ii) Prior to 2003M04: i) backdated using the following series: Bank of Japan (2025 <i>e</i>)
m2	1968M01–2025M02	Monetary aggregate M2; JPY millions The following series times 100 after X11 seasonal adjustment: i) Since 2003M04: Bank of Japan (2025 <i>f</i>) ii) Prior to 2003M04: i) backdated using the following series: Bank of Japan (2025 <i>g</i>)
m3	1997M01–2025M02	Monetary aggregate M3; JPY millions The following series times 100 after X11 seasonal adjustment: i) Since 2003M04: Bank of Japan (2025 <i>h</i>) ii) Prior to 2003M04: i) backdated using the following series: Bank of Japan (2025 <i>i</i>)
ml	1981M01–2025M02	Monetary aggregate L; JPY millions The following series times 100 after X11 seasonal adjustment: i) Since 2003M04: Bank of Japan (2025 <i>b</i>) ii) Prior to 2003M04: i) backdated using the following series: Bank of Japan (2025 <i>c</i>)
policy	1946M01–2024M07	Policy rate; Percent BIS (2025 <i>a</i>)
tona_1d	1985M07–2025M03	Call Rate, Uncollateralized Overnight/Average; Percent Bank of Japan (2025 <i>a</i>)

Variable	Range	Description
gov_9y	1974M09–2025M03	Japanese Government Bonds Interest Rate, 9 years; Percent Monthly (simple arithmetic) averages of the following series: Ministry of Finance, Japan (2025 <i>c</i>)
gov_10y	1986M07–2025M03	Japanese Government Bonds Interest Rate, 10 years; Percent Monthly (simple arithmetic) averages of the following series: Ministry of Finance, Japan (2025 <i>a</i>)
gov_20y	1986M12–2025M03	Japanese Government Bonds Interest Rate, 20 years; Percent Monthly (simple arithmetic) averages of the following series: Ministry of Finance, Japan (2025 <i>b</i>)
n225	1949M05–2024M08	Nikkei 225 Monthly (simple arithmetic) averages of the following series: Nikkei Industry Research Institute (2025)
reer	1994M01–2024M07	Real effective exchange rate; Index (2015 = 100) The following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>b</i>)
xr_usd	1957M01–2024M07	Exchange rate to USD; JPY per USD IMF (2025 <i>a</i>)

5. South Korea (KR)

Variable	Range	Description
gdp_nom	1990M01–2024M09	(Estimated) Nominal gross domestic product (GDP); KRW millions This series has been constructed by applying Chow and Lin (1971) temporal disaggregation to gdp_nom from Section 18 using a constant and the following monthly real gdp proxy times cpi (as described below) divided by 100 as regressors: Chow and Lin (1971) temporal diagggregated series $\text{gdp_nom}/\text{gdp_defl} \cdot 100$, with gdp_nom and gdp_defl as described in Section 18, using a constant and the series OECD (2025<i>d</i>) as regressors
gdp_defl	1990M01–2024M09	(Estimated) GDP deflator; 2015 = 100 This series has been constructed by dividing the monthly real gdp proxy described above into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100
cpi	1965M01–2025M02	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the annual (simple arithmetic) average in 2015 is equal to 100: The following series after X11 seasonal adjustment: Bank of Korea (2025<i>a</i>)
ur	1983M01–2025M02	Unemployment rate; Percent i) Since 1999M06: Bank of Korea (2025<i>i</i>) ii) Prior to 1999M06: The following series after X11 seasonal adjustment: IMF (2025<i>m</i>)
m1	1970M01–2025M01	Monetary aggregate M1; KRW millions The following series times 1000: Bank of Korea (2025<i>f</i>)

Variable	Range	Description
m2	1970M01–2025M01	Monetary aggregate M2; KRW millions The following series times 1000: Bank of Korea (2025 <i>g</i>)
policy	1999M05–2024M07	Policy rate; Percent BIS (2025 <i>a</i>)
cmr_1d	1976M08–2025M02	Uncollateralized Call Rate (Overnight); Percent i) Since 1991M01: Bank of Korea (2025 <i>h</i>) ii) Prior to 1991M01: IMF (2025 <i>l</i>)
gov_10y	1973M05–2025M02	Yields on Treasury Bonds (10-year); Percent i) Since 2000M10: Bank of Korea (2025 <i>j</i>) ii) Prior to 2000M10: IMF (2025 <i>b</i>)
kospi	1996M12–2025M04	KOSPI Monthly (simple arithmetic) averages of the following series: Yahoo! Finance (2025 <i>e</i>)
kosdaq	2000M10–2025M04	KOSDAQ Monthly (simple arithmetic) averages of the following series: Yahoo! Finance (2025 <i>d</i>)
reer	1994M01–2024M07	Real effective exchange rate; Index (2015 = 100) The following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>b</i>)
xr_usd	1957M01–2024M07	Exchange rate to USD; KRW per USD IMF (2025 <i>a</i>)

6. New Zealand (NZ)*

Variable	Range	Description
m1	1988M03–2024M06	Monetary aggregate M1; NZD millions The following series after being seasonally adjusted using the X11 procedure: i) Since 1988M03: The following series: a) Since 2016M12: Reserve Bank of New Zealand (2025<i>f</i>) b) 1988M03–2016M11: ia) backdated using growth rates (previous period) of Reserve Bank of New Zealand (2025<i>d</i>) ii) 1981M01–1988M02: i) backdated using growth rates (previous period) of Reserve Bank of New Zealand (2025<i>e</i>)
bm	1988M03–2024M06	Monetary aggregate Broad Money; NZD millions The following series after being seasonally adjusted using the X11 procedure: i) Since 1988M03: Reserve Bank of New Zealand (2025<i>b</i>) ii) Prior to 1988M03: i) backdated using growth rates (previous period) of IMF (2025<i>k</i>)
policy	1985M01–2024M07	Policy rate; Percent BIS (2025<i>a</i>)
cr_1d	1985M01–2025M03	Overnight interbank cash rate; Percent Reserve Bank of New Zealand (2025<i>j</i>)
bb_3m	1985M01–2025M03	Bank bill yields, 90 days; Percent Reserve Bank of New Zealand (2025<i>a</i>)
gov_10y	1985M03–2025M03	Secondary market government bond yields, 10 year; Percent Reserve Bank of New Zealand (2025<i>n</i>)

Variable	Range	Description
reer	1994M01–2024M07	Real effective exchange rate; Index (2015 = 100) The following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>b</i>)
xr_usd	1957M01–2024M07	Exchange rate to USD; NZD per USD IMF (2025 <i>a</i>)

7. Norway (NO)

Variable	Range	Description
gdp_nom	1979M01–2024M09	Nominal gross domestic product (GDP); NOK millions This series has been constructed by applying Chow and Lin (1971) temporal disaggregation to gdp_nom from Section 20 using a constant and the following monthly real gdp proxy times cpi (as described below) divided by 100 as regressors: Chow and Lin (1971) temporal diagggregated series $\text{gdp_nom}/\text{gdp_defl} \cdot 100$, with gdp_nom and gdp_defl as described in Section 20, using a constant and the series OECD (2025 <i>d</i>) as regressors
gdp_defl	1979M01–2024M09	GDP deflator; 2015 = 100 This series has been constructed by dividing the monthly real gdp proxy described above into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100
cpi	1979M01–2025M02	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series, such that the annual (simple arithmetic) average in 2015 is equal to 100: Statistics Norway (2025 <i>b</i>)

Variable	Range	Description
ur	2006M01–2025M02	Unemployment rate; Percent Statistics Norway (2025 <i>k</i>)
m1	1919M01–2025M02	Monetary aggregate M1; NOK millions The following series after being seasonally adjusted using the X11 procedure: i) Since 1992M12: The following series: a) Since 2008M01: Statistics Norway (2025 <i>c</i>) b) 1992M12–2007M12: ia) backdated using growth rates (previous period) of Norges Bank (2025 <i>d</i>) ii) 1919M01–1992M11: i) backdated using growth rates (previous period) of Norges Bank (2025 <i>e</i>)
m2	1919M01–2025M02	Monetary aggregate M2; NOK millions The following series after being seasonally adjusted using the X11 procedure: i) Since 2008M01: Statistics Norway (2025 <i>d</i>) ii) 1919M01–2007M12: i) backdated using growth rates (previous period) of Norges Bank (2025 <i>g</i>)
m3	2008M01–2025M02	Monetary aggregate M3; NOK millions The following series after being seasonally adjusted using the X11 procedure: Statistics Norway (2025 <i>e</i>)
policy	1986M03–2024M07	Policy rate; Percent BIS (2025 <i>a</i>)
nowa_1d	1982M01–2025M02	NOWA (overnight) rate; Percent i) Since 2011M10: Norges Bank (2025 <i>h</i>) ii) Prior to 2011M10: OECD (2025 <i>b</i>)

Variable	Range	Description
nibor_3m	1979M01–2025M02	NIBOR, 3 months; Percent i) Since 2013M12: Statistics Norway (2025 <i>f</i>) ii) Prior to 2013M12: OECD (2025 <i>a</i>)
gov_10y	1985M01–2025M02	Norwegian government bonds, 10 years; Percent i) Since 2019M01: Norges Bank (2025 <i>c</i>) ii) Prior to 2019M01: OECD (2025 <i>c</i>)
reer	1994M01–2024M07	Real effective exchange rate; Index (2015 = 100) The following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>b</i>)
xr_usd	1957M01–2024M07	Exchange rate to USD; NOK per USD IMF (2025 <i>a</i>)

8. Sweden (SE)

Variable	Range	Description
gdp_nom	2000M01–2024M09	Nominal gross domestic product (GDP); SEK millions This series has been constructed by applying Chow and Lin (1971) temporal disaggregation to gdp_nom from Section 21 using a constant and the following monthly real gdp proxy times cpi (as described below) divided by 100 as regressors: Chow and Lin (1971) temporal diagggregated series $\text{gdp_nom}/\text{gdp_defl} \cdot 100$, with gdp_nom and gdp_defl as described in Section 21, using a constant and the series Eurostat (2025 <i>f</i>) as regressors

Variable	Range	Description
gdp_defl	2000M01–2024M09	GDP deflator; 2015 = 100 This series has been constructed by dividing the monthly real gdp proxy described above into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100
cpi	1954M06–2024M07	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series, such that the annual (simple arithmetic) average in 2015 is equal to 100: Statistics Sweden (2025 <i>a</i>)
ur	1983M01–2025M02	Unemployment rate; Percent Eurostat (2025 <i>j</i>)
m1	1998M01–2024M06	Monetary aggregate M1; SEK millions The following series after being seasonally adjusted using the X11 procedure: i) Since 2004M01: Statistics Sweden (2025 <i>b</i>) ii) Prior to 2004M01: i) backdated using growth rates (previous period) of IMF (2025 <i>i</i>)
m3	1961M01–2024M06	Monetary aggregate M3; SEK millions The following series after being seasonally adjusted using the X11 procedure: i) Since 2004M01: Statistics Sweden (2025 <i>c</i>) ii) Prior to 2004M01: i) backdated using growth rates (previous period) of IMF (2025 <i>k</i>)
policy	1946M01–2024M07	Policy rate; Percent BIS (2025 <i>a</i>)
ibr_3m	1991M03–2025M02	Sweden interbank 3m delayed; Percent ECB Data Portal (2025 <i>y</i>)

Variable	Range	Description
gov_10y	1987M01–2025M02	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Swedish krona; Percent ECB Data Portal (2025 <i>q</i>)
reer	1994M01–2024M07	Real effective exchange rate; Index (2015 = 100) The following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>b</i>)
xr_usd	1957M01–2024M07	Exchange rate to USD; SEK per USD IMF (2025 <i>a</i>)

9. Switzerland (CH)

Variable	Range	Description
gdp_nom	2010M10–2024M09	(Estimated) Nominal gross domestic product (GDP); CHF millions This series has been constructed by applying Chow and Lin (1971) temporal disaggregation to gdp_nom from Section 22 using a constant and the following monthly real gdp proxy times cpi (as described below) divided by 100 as regressors: Chow and Lin (1971) temporal diagggregated series $\text{gdp_nom}/\text{gdp_defl} \cdot 100$, with gdp_nom and gdp_defl as described in Section 22, using a constant and the series OECD (2025 <i>d</i>) as regressors
gdp_defl	2010M10–2024M09	(Estimated) GDP deflator; 2015 = 100 This series has been constructed by dividing the monthly real gdp proxy described above into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100

Variable	Range	Description
cpi	1921M01–2025M02	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the annual (simple arithmetic) average in 2015 is equal to 100: The following series after X11 seasonal adjustment: Swiss National Bank (2025<i>p</i>)
ur	1970M01–2025M02	Unemployment rate; Percent Swiss National Bank (2025<i>h</i>)
m1	1950M01–2025M02	Monetary aggregate M1; CHF millions The following series after X11 seasonal adjustment: i) Since 1984M12: Swiss National Bank (2025<i>l</i>) ii) Prior to 1984M12: i) backdated using growth rates (previous period) of: Swiss National Bank (2025<i>i</i>)
m2	1975M06–2025M02	Monetary aggregate M2; CHF millions The following series after X11 seasonal adjustment: i) Since 1984M12: Swiss National Bank (2025<i>m</i>) ii) Prior to 1984M12: i) backdated using growth rates (previous period) of: Swiss National Bank (2025<i>j</i>)
m3	1975M06–2025M02	Monetary aggregate M3; CHF millions The following series after X11 seasonal adjustment: i) Since 1984M12: Swiss National Bank (2025<i>n</i>) ii) Prior to 1984M12: i) backdated using growth rates (previous period) of: Swiss National Bank (2025<i>k</i>)

Variable	Range	Description
policy	1946M01–2024M07	Policy rate; Percent BIS (2025a)
saron_1d	1972M01–2025M03	Swiss Average Rate Overnight (SARON); Percent i) Since 1999M06: Swiss National Bank (2025q) ii) Prior to 1999M06: Swiss National Bank (2025a)
mmdrc_3m	1974M01–2025M03	Money market debt register claims of the Swiss Confederation, 3-month; Percent i) Since 1994M01: Swiss National Bank (2025o) ii) Prior to 1994M01: End of month observations of the following series: Swiss National Bank (2025g)
gov_10y	1924M01–2025M03	CHF Swiss Confederation bond issues, 10 years; Percent i) Since 1988M01: Swiss National Bank (2025b) ii) Prior to 1988M01: Swiss National Bank (2025t)
smi	1989M01–2025M03	SMI Swiss Market Index (excluding dividend reinvestment) Monthly (simple arithmetic) averages of the following series: Swiss National Bank (2025r)

Part II.

Quarterly Datasets

14. Australia (AU)

Variable	Range	Description
pce_nom	1959Q3–2024Q4	Nominal personal consumption expenditure (PCE); AUD millions Product of the following two series divided by 100: Reserve Bank of Australia (2025g), Reserve Bank of Australia (2025k)
gdp_nom	1959Q3–2024Q4	Nominal gross domestic product (GDP); AUD millions Reserve Bank of Australia (2025k)
pce_defl	1959Q3–2024Q4	PCE deflator; 2015 = 100 This series has been constructed by dividing the following series into pce_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100: Reserve Bank of Australia (2025f)
gdp_defl	1959Q3–2024Q4	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100: Reserve Bank of Australia (2025l)
cpi	1922Q2–2024Q4	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series after X11 seasonal adjustment such that the annual (simple arithmetic) average in 2015 is equal to 100: Reserve Bank of Australia (2025e)
ur	1978Q1–2025Q1	Unemployment rate; Percent Quarterly (simple arithmetic) averages of the following series: Reserve Bank of Australia (2025m)
m1	1975Q1–2025Q1	Monetary aggregate M1; AUD millions End of quarter observations of the following series times 1000: Reserve Bank of Australia (2025i)

Variable	Range	Description
m3	1965Q1–2025Q1	Monetary aggregate M3; AUD millions End of quarter observations of the following series times 1000: Reserve Bank of Australia (2025j)
bm	1976Q3–2025Q1	Monetary aggregate Broad money; AUD millions End of quarter observations of the following series times 1000: Reserve Bank of Australia (2025c)
policy	1976Q2–2024Q3	Policy rate; Percent Quarterly (simple arithmetic) averages of the following series: BIS (2025a)
iocr_1d	1976Q2–2025Q1	Interbank Overnight Cash Rate; Percent Quarterly (simple arithmetic) averages of the following series: Reserve Bank of Australia (2025h)
bab_3m	1969Q2–2025Q1	3-month BABs/NCDs rates; Percent Quarterly (simple arithmetic) averages of the following series: Reserve Bank of Australia (2025a)
gov_10y	1969Q3–2025Q1	Commonwealth Government 10 year bond yields; Percent Quarterly (simple arithmetic) averages of the following series: i) Since 2013M06: Reserve Bank of Australia (2025d) ii) Prior to 2013M06: Reserve Bank of Australia (2025b)
xjo	1992Q4–2025Q1	S&P/ASX 200 Quarterly (simple arithmetic) averages of the following series: Yahoo! Finance (2025f)
xao	1984Q3–2025Q1	S&P/ASX All Ordinaries Quarterly (simple arithmetic) averages of the following series: Yahoo! Finance (2025a)

Variable	Range	Description
reer	1994Q1–2024Q3	Real effective exchange rate; Index (2015 = 100) Quarterly (simple arithmetic) averages of the following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>b</i>)
rrppi	1970Q1–2024Q1	Real residential property price index; 2015 = 100 This series has been constructed by adjusting the following series such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>c</i>)
xr_usd	1957Q1–2024Q3	Exchange rate to USD; AUD per USD Quarterly (simple arithmetic) averages of the following series: IMF (2025 <i>a</i>)
hfwh	1988Q2–2024Q4	Household financial assets; AUD millions The following series times 1000: Reserve Bank of Australia (2024 <i>b</i>)
hnfwh	1988Q3–2024Q4	Household non-financial assets; AUD millions The following series times 1000: Reserve Bank of Australia (2024 <i>c</i>)
hhwh	1988Q3–2024Q4	Household housing wealth; AUD millions The following series times 1000: Reserve Bank of Australia (2024 <i>a</i>)

15. Canada (CA)

Variable	Range	Description
pce_nom	1961Q1–2024Q4	Nominal personal consumption expenditure (PCE); CAD millions Sum of the following two series, divided by 4: Statistics Canada (2025 <i>m</i>), Statistics Canada (2025 <i>n</i>)

Variable	Range	Description
gdp_nom	1961Q1–2024Q4	Nominal gross domestic product (GDP); CAD millions The following series divided by 4: Statistics Canada (2025 <i>k</i>)
pce_defl	1961Q1–2024Q4	PCE deflator; 2015 = 100 This series has been constructed by dividing the sum of the following two series into pce_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100: The following series divided by 4: Statistics Canada (2025 <i>r</i>), Statistics Canada (2025 <i>s</i>)
gdp_defl	1961Q1–2024Q4	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100: The following series divided by 4: Statistics Canada (2025 <i>p</i>)
cpi	1914Q1–2025Q1	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the annual (simple arithmetic) average in 2015 is equal to 100: Quarterly (simple arithmetic) averages of the following series: i) Since 1992M01: Statistics Canada (2025 <i>b</i>) ii) Prior to 1992M01: i) backdated using growth rates (previous period) of the following series after X11 seasonal adjustment: Statistics Canada (2025 <i>a</i>)
ur	1976Q1–2025Q1	Unemployment rate; Percent Quarterly (simple arithmetic) averages of the following series: Statistics Canada (2025 <i>z</i>)
m1p	1975Q1–2024Q4	Monetary Aggregate M1+; CAD millions

Variable	Range	Description
		End of quarter observations of the following series: Statistics Canada (2025 <i>e</i>)
m1pp	1968Q1–2024Q4	Monetary Aggregate M1++; CAD millions End of quarter observations of the following series: Statistics Canada (2025 <i>f</i>)
m2p	1968Q1–2024Q4	Monetary Aggregate M2+; CAD millions End of quarter observations of the following series: Statistics Canada (2025 <i>g</i>)
m2pp	1968Q1–2024Q4	Monetary Aggregate M2++; CAD millions End of quarter observations of the following series: Statistics Canada (2025 <i>h</i>)
m2	1968Q1–2024Q4	Monetary Aggregate M2; CAD millions End of quarter observations of the following series: Statistics Canada (2025 <i>i</i>)
m3	1970Q1–2024Q4	Monetary Aggregate M3; CAD millions End of quarter observations of the following series: Statistics Canada (2025 <i>j</i>)
policy	1960Q3–2024Q3	Policy rate; Percent Quarterly (simple arithmetic) averages of the following series: BIS (2025 <i>a</i>)
ommfr_1d	1975Q1–2025Q1	Overnight money market financing rate; Percent Quarterly (simple arithmetic) averages of the following series: Statistics Canada (2025 <i>o</i>)
tb_3m	1962Q1–2025Q1	Treasury Bill yields, 3 month; Percent Quarterly (simple arithmetic) averages of the following series: Statistics Canada (2025 <i>y</i>)
gov_10y	1982Q2–2025Q1	Government of Canada benchmark bond yields, 10 years; Percent Quarterly (simple arithmetic) averages of the following series: Statistics Canada (2025 <i>t</i>)

Variable	Range	Description
gov_long	1976Q1–2025Q1	Government of Canada benchmark bond yields, long term; Percent Quarterly (simple arithmetic) averages of the following series: Statistics Canada (2025 <i>u</i>)
osptx	1956Q1–2023Q3	Standard and Poor’s/Toronto Stock Exchange Composite Index Quarterly (simple arithmetic) averages of the following series: Statistics Canada (2025 <i>w</i>)
tsx60	1982Q1–2023Q3	Standard and Poor’s/Toronto Stock Exchange 60 Index Quarterly (simple arithmetic) averages of the following series: Statistics Canada (2025 <i>v</i>)
reer	1994Q1–2024Q3	Real effective exchange rate; Index (2015 = 100) Quarterly (simple arithmetic) averages of the following series, which has been adjusted such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>b</i>)
rrppi	1970Q1–2024Q1	Real residential property price index; 2015 = 100 This series has been constructed by adjusting the following series such that the annual (simple arithmetic) average in 2015 is equal to 100: BIS (2025 <i>c</i>)
xr_usd	1957Q1–2024Q3	Exchange rate to USD; CAD per USD Quarterly (simple arithmetic) averages of the following series: IMF (2025 <i>a</i>)
hfwh	1990Q1–2024Q4	Household financial assets; CAD millions Statistics Canada (2024 <i>c</i>)
hnfwh	1990Q1–2024Q4	Household non-financial assets; CAD millions Statistics Canada (2024 <i>b</i>)
hhwh	1990Q1–2024Q4	Household housing wealth; CAD millions Statistics Canada (2024 <i>a</i>)

16. Denmark (DK)

Variable	Range	Description
pce_nom	1991Q1–2024Q4	Nominal personal consumption expenditure (PCE); DKK millions Eurostat (2025 <i>d</i>)
gdp_nom	1991Q1–2024Q4	Nominal gross domestic product (GDP); DKK millions Eurostat (2025 <i>c</i>)
pce_defl	1991Q1–2024Q4	PCE deflator; 2015 = 100 This series has been constructed by dividing the following series into pce_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100: Eurostat (2025 <i>i</i>)
gdp_defl	1991Q1–2024Q4	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the annual (simple arithmetic) average in 2015 is equal to 100: Eurostat (2025 <i>h</i>)
cpi	1980Q1–2024Q3	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series, such that the annual (simple arithmetic) average in 2015 is equal to 100: Quarterly (simple arithmetic) averages of the following series: Statistics Denmark (2025)
ur	1983Q1–2025Q1	Unemployment rate; Percent Quarterly (simple arithmetic) averages of the following series: Eurostat (2025 <i>j</i>)
m1	1991Q1–2024Q2	Monetary aggregate M1; DKK millions End of quarter observations of the following series after being seasonally adjusted using the X11 procedure: i) Since 2003M01: Danmarks Nationalbank (2025 <i>a</i>) ii) Prior to 2003M01: i) backdated using growth rates (previous period) of IMF (2025 <i>i</i>)

Variable	Range	Description
m2	1991Q1–2024Q2	Monetary aggregate M2; DKK millions End of quarter observations of the following series after being seasonally adjusted using the X11 procedure: i) Since 2003M01: Danmarks Nationalbank (2025<i>b</i>) ii) Prior to 2003M01: i) backdated using growth rates (previous period) of IMF (2025<i>j</i>)

Annual Datasets

27. Australia (AU)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1870–2024	Nominal gross domestic product (GDP); AUD millions i) Since 1960: Sum of the values for the last two quarters of the previous year and first two quarters of the current year of Reserve Bank of Australia (2025<i>k</i>) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, gdp)
gdp_defl	1871–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1960: Sum of the values for the last two quarters of the previous year and first two quarters of the current year of Reserve Bank of Australia (2025<i>l</i>) ii) Prior to 1960: i) backdated using growth rates (previous period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1870–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100: i) Since 1922: Annual (simple arithmetic) averages of Reserve Bank of Australia (2025<i>e</i>) ii) Prior to 1922: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)

Variable	Range	Description
ur	1901–2024	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp)
narrow	1870–2024	Monetary aggregate M1; AUD millions i) Since 1975: End of year observations of m1 data described in Section 14 ii) Prior to 1975: i) backdated using growth rates (previous period) of Jordà et al. (2017, narrow)
broad	1870–2024	Monetary aggregate M3; AUD millions i) Since 1965: End of year observations of m3 data described in Section 14 ii) Prior to 1965: i) backdated using growth rates (previous period) of Jordà et al. (2017, money)
stir	1870–2024	Interbank Overnight Cash Rate; Percent i) Since 1976: Annual (simple arithmetic) averages of Reserve Bank of Australia (2025 <i>h</i>) ii) Prior to 1976: Jordà et al. (2017, stir) Note that Jordà et al. (2017, stir) lacks data for Australia for 1945–1947. The missing observations have been imputed by the (simple arithmetic) average of the data for 1944 and 1948.
ltir	1870–2024	Commonwealth Government 10 year bond yields; Percent i) Since 2013: Annual (simple arithmetic) averages of Reserve Bank of Australia (2025 <i>d</i>) ii) Prior to 2013: Jordà et al. (2017, ltrate)

Variable	Range	Description
xr_usd	1870–2024	Exchange rate to USD; AUD per USD i) Since 1957: Annual (simple arithmetic) averages of IMF (2025 <i>a</i>) ii) Prior to 1957: Jordà et al. (2017, xrusd)

28. Belgium (BE)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1870–2024	Nominal gross domestic product (GDP); EUR millions i) Since 1995: Eurostat (2025 <i>b</i>) ii) Prior to 1995: i) backdated using growth rates (previous period) of Jordà et al. (2017, gdp)
gdp_defl	1871–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1995: Eurostat (2025 <i>g</i>) ii) Prior to 1995: i) backdated using growth rates (previous period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1870–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100:

Variable	Range	Description
		i) Since 1996: Annual (simple arithmetic) averages of Eurostat (2025a) ii) Prior to 1996: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)
ur	1921–2023	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp) Note that Jordà et al. (2017, unemp) lacks data for Belgium for 1940–1944. The missing observations have been imputed by the (simple arithmetic) average of the data for 1939 and 1945.
narrow	1877–2024	(Contribution to Euro Area) Monetary aggregate M1; EUR millions i) Since 1997: End of year observations of m1 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 1997: i) backdated using growth rates (previous period) of Jordà et al. (2017, narrow) Note that Jordà et al. (2017, narrow) lacks data for Belgium for 1914–1919 and 1941–1946. The missing observations have been imputed using the average annual growth rate for the periods 1914–1920 and 1941–1947.
broad	1979–2024	(Contribution to Euro Area) Monetary aggregate M3; EUR millions i) Since 1997: End of year observations of m3 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 1997: i) backdated using growth rates (previous period) of Jordà et al. (2017, money)

Variable	Range	Description
stir	1870–2024	Euribor, 3-month; Percent i) Since 1957: Annual (simple arithmetic) averages of the following series: a) Since 1999M01: ECB Data Portal (2025<i>i</i>) b) 1957M11-1998M12: OECD (2025<i>a</i>) ii) Prior to 1957: Jordà et al. (2017, stir) Note that Jordà et al. (2017, stir) lacks data for Belgium for 1915-1919 The missing observations have been imputed by the (simple arithmetic) average of the data for 1914 and 1920.
ltir	1870–2024	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Euro; Percent i) Since 1955: Annual (simple arithmetic) averages of the following series: a) Since 1993M01: ECB Data Portal (2025<i>q</i>) b) 1955M01-1992M12: OECD (2025<i>c</i>) ii) Prior to 1955: Jordà et al. (2017, ltrate) Note that Jordà et al. (2017, ltrate) lacks data for Belgium for 1913-1919 The missing observations have been imputed by the (simple arithmetic) average of the data for 1912 and 1920.
xr_usd	1870–2024	Exchange rate to USD; EUR per USD i) Since 1999: Annual (simple arithmetic) averages of IMF (2025<i>a</i>) for the Euro Area ii) Prior to 1999: Jordà et al. (2017, xrusd) divided by 40.3399 (fixed BEF/EUR conversion rate)

29. Canada (CA)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1870–2024	Nominal gross domestic product (GDP); CAD millions i) Since 1981: Statistics Canada (2025<i>l</i>) ii) Prior to 1981: i) backdated using growth rates (previous period) of Jordà et al. (2017, gdp)
gdp_defl	1871–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1981: Statistics Canada (2025<i>q</i>) ii) Prior to 1981: i) backdated using growth rates (previous period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1870–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100: i) Since 1992: Annual (simple arithmetic) averages of Statistics Canada (2025<i>b</i>) ii) Prior to 1992: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)
ur	1916–2024	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp)

Variable	Range	Description
narrow	1871–2024	Monetary aggregate M1+; CAD millions End of year observations of the following series: i) Since 1975M03: Statistics Canada (2025<i>d</i>) ii) 1953M01–1975M02: i) backdated using growth rates of IMF (2025<i>i</i>) iii) Prior 1953M01: ii) backddated using growth rates of the M1 series of Metcalf et al. (1998)
broad	1871–2024	Monetary aggregate M2+; CAD millions End of year observations of the following series: i) Since 1958M01: Statistics Canada (2025<i>d</i>) ii) Prior 1968M01: i) backddated using growth rates of the M2 series of Metcalf et al. (1998)
stir	1934–2024	Treasury bill auction – average yields: 3 month; Percent i) Since 1935: Annual (simple arithmetic) averages of Statistics Canada (2025<i>x</i>) (using data since 1935M06) ii) Prior to 1935: Jordà et al. (2017, stir)
ltir	1870–2024	Government of Canada marketable bonds, average yield: over 10 years; Percent i) Since 1936: Annual (simple arithmetic) averages of Statistics Canada (2025<i>c</i>) ii) Prior to 1936: Jordà et al. (2017, ltrate)
xr_usd	1870–2024	Exchange rate to USD; CAD per USD i) Since 1957: Annual (simple arithmetic) averages of IMF (2025<i>a</i>) ii) Prior to 1957: Jordà et al. (2017, xrusd)

30. Denmark (DK)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1870–2024	Nominal gross domestic product (GDP); DKK millions i) Since 1975: Eurostat (2025b) ii) Prior to 1975: i) backdated using growth rates (previous period) of Jordà et al. (2017, gdp)
gdp_defl	1871–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1975: Eurostat (2025g) ii) Prior to 1975: i) backdated using growth rates (previous period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1870–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100: i) Since 1980: Annual (simple arithmetic) averages of Statistics Denmark (2025) ii) Prior to 1980: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)
ur	1874–2023	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp)

Variable	Range	Description
narrow	1870–2024	Monetary aggregate M1; DKK millions i) Since 2003: End of year observations of m1 data as described in Section 16 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 2003: i) backdated using growth rates (previous period) of Jordà et al. (2017, narrow) Note that Jordà et al. (2017, narrow) lacks data for Denmark for 1946–1949. The missing observations have been imputed using the growth rates of broad for 1947–1950.
broad	1870–2024	Monetary aggregate M2; DKK millions i) Since 2003: End of year observations of m2 data as described in Section 16 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 2003: i) backdated using growth rates (previous period) of Jordà et al. (2017, money)
stir	1875–2024	Denmark interbank 3m delayed; Percent i) Since 1988: Annual (simple arithmetic) averages of ECB Data Portal (2025<i>d</i>) ii) Prior to 1988: Jordà et al. (2017, stir)
ltir	1870–2024	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Danish krone; Percent i) Since 1983: Annual (simple arithmetic) averages of ECB Data Portal (2025<i>q</i>) ii) Prior to 1983: Jordà et al. (2017, ltrate)
xr_usd	1870–2024	Exchange rate to USD; DKK per USD i) Since 1957: Annual (simple arithmetic) averages of IMF (2025<i>a</i>) ii) Prior to 1957: Jordà et al. (2017, xrusd)

31. Finland (FI)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1870–2024	Nominal gross domestic product (GDP); EUR millions i) Since 1980: Eurostat (2025<i>b</i>) ii) Prior to 1980: i) backdated using growth rates (previous period) of Jordà et al. (2017, gdp)
gdp_defl	1871–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1980: Eurostat (2025<i>g</i>) ii) Prior to 1980: i) backdated using growth rates (previous period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1870–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100: i) Since 1996: Annual (simple arithmetic) averages of Eurostat (2025<i>a</i>) ii) Prior to 1996: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)
ur	1920–2023	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp)

Variable	Range	Description
		Note that Jordà et al. (2017, unemp) lacks data for Finland for 1939–1949. The missing observations have been imputed by the (simple arithmetic) average of the data for 1938 and 1950.
narrow	1870–2024	(Contribution to Euro Area) Monetary aggregate M1; EUR millions i) Since 1996: End of year observations of the following series: a) Since 1997M09: m1 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) b) 1996M01–1997M08: ia) backdated using growth rates (previous period) of Finlands Bank (2025a) ii) Prior to 1996: i) backdated using growth rates (previous period) of Jordà et al. (2017, narrow)
broad	1870–2024	(Contribution to Euro Area) Monetary aggregate M2; EUR millions i) Since 1980: End of year observations of the following series: a) Since 1997M09: m2 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) b) 1980M01–1997M08: ia) backdated using growth rates (previous period) of Finlands Bank (2025b) ii) Prior to 1980: i) backdated using growth rates (previous period) of Jordà et al. (2017, money)
stir	1870–2024	Euribor, 3-month; Percent i) Since 1987: Annual (simple arithmetic) averages of the following series: a) Since 1999M01: ECB Data Portal (2025i) b) 1987M11–1998M12: OECD (2025a)

Variable	Range	Description
		ii) Prior to 1987: Jordà et al. (2017, stir)
ltir	1870–2024	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Euro; Percent i) Since 1960: Annual (simple arithmetic) averages of the following series: a) Since 1993M01: ECB Data Portal (2025<i>g</i>) b) 1960M01-1992M12: OECD (2025<i>c</i>) ii) Prior to 1960: Jordà et al. (2017, ltrate) Note that Jordà et al. (2017, ltrate) lacks data for Finland for 1939–1947. The missing observations have been imputed by the (simple arithmetic) average of the data for 1938 and 1948.
xr_usd	1870–2024	Exchange rate to USD; EUR per USD i) Since 1999: Annual (simple arithmetic) averages of IMF (2025<i>a</i>) for the Euro Area ii) Prior to 1999: Jordà et al. (2017, xrusd) divided by 5.94573 (fixed FIM/EUR conversion rate)

32. France (FR)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1870–2024	Nominal gross domestic product (GDP); EUR millions i) Since 1975: Eurostat (2025<i>b</i>) ii) Prior to 1975: i) backdated using growth rates (pre-

Variable	Range	Description
		vious period) of Jordà et al. (2017, gdp)
gdp_defl	1871–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1975: Eurostat (2025g) ii) Prior to 1975: i) backdated using growth rates (previous period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1870–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100: i) Since 1996: Annual (simple arithmetic) averages of Eurostat (2025a) ii) Prior to 1996: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)
ur	1895–2023	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp) Note that Jordà et al. (2017, unemp) lacks data for France for 1914–1920 and 1940–1949. The missing observations have been imputed by the (simple arithmetic) average of the data for 1913 and 1921, and 1939 and 1950, respectively.
narrow	1870–2024	(Contribution to Euro Area) Monetary aggregate M1; EUR millions i) Since 1977: End of year observations of the following series: a) Since 1997M09: m1 data described in Section 26

Variable	Range	Description
		(before being seasonally adjusted and taking the end of quarter observations) b) 1977M12–1997M08: ia) backdated using growth rates (previous period) of Banque de France (2025<i>a</i>) ii) Prior to 1977: i) backdated using growth rates (previous period) of Jordà et al. (2017, narrow) Note that Jordà et al. (2017, narrow) lacks data for France for 1914–1919. The missing observations have been imputed using the average annual growth rate for 1914–1920.
broad	1870–2024	(Contribution to Euro Area) Monetary aggregate M2; EUR millions i) Since 1980: End of year observations of the following series: a) Since 1997M09: m2 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) b) 1980M01–1997M08: ia) backdated using growth rates (previous period) of Banque de France (2025<i>b</i>) ii) Prior to 1980: i) backdated using growth rates (previous period) of Jordà et al. (2017, money) Note that Jordà et al. (2017, money) lacks data for France for 1914–1919. The missing observations have been imputed using the average annual growth rate for 1914–1920.
stir	1870–2024	Euribor, 3-month; Percent i) Since 1987: Annual (simple arithmetic) averages of the following series: a) Since 1999M01: ECB Data Portal (2025<i>i</i>) b) 1987M01–1998M12: OECD (2025<i>a</i>) ii) Prior to 1987: Jordà et al. (2017, stir) Note that Jordà et al. (2017, stir) lacks data for France for 1915–1921. The missing observations have

Variable	Range	Description
		been imputed by the (simple arithmetic) average of the data for 1914 and 1922.
ltir	1870–2024	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Euro; Percent i) Since 1960: Annual (simple arithmetic) averages of the following series: a) Since 1993M01: ECB Data Portal (2025<i>g</i>) b) 1960M01-1992M12: OECD (2025<i>c</i>) ii) Prior to 1960: Jordà et al. (2017, ltrate)
xr_usd	1870–2024	Exchange rate to USD; EUR per USD i) Since 1999: Annual (simple arithmetic) averages of IMF (2025<i>a</i>) for the Euro Area ii) Prior to 1999: Jordà et al. (2017, xrusd) divided by 6.55957 (fixed FRF/EUR conversion rate)

33. Germany (DE)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1870–2024	Nominal gross domestic product (GDP); EUR millions i) Since 1975: Eurostat (2025<i>b</i>) ii) Prior to 1975: i) backdated using growth rates (previous period) of Jordà et al. (2017, gdp) Note that Jordà et al. (2017, gdp) lacks data for Germany for 1945. The missing observation has been

Variable	Range	Description
		imputed using the real GDP growth rate computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop) and the CPI growth rate of Jordà et al. (2017, cpi).
gdp_defl	1871–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1991: Eurostat (2025g) ii) Prior to 1991: i) backdated using growth rates (previous period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1870–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100: i) Since 1996: Annual (simple arithmetic) averages of Eurostat (2025a) ii) Prior to 1996: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)
ur	1887–2023	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp) Note that Jordà et al. (2017, unemp) lacks data for Germany for 1940–1945. The missing observations have been imputed by the (simple arithmetic) average of the data for 1939 and 1946.
narrow	1870–2024	(Contribution to Euro Area) Monetary aggregate M1; EUR millions i) Since 1980: End of year observations of the following

Variable	Range	Description
		series: a) Since 1997M09: m1 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) b) 1980M01–1997M08: ia) backdated using growth rates (previous period) of Deutsche Bundesbank (2025<i>a</i>) ii) Prior to 1980: i) backdated using growth rates (previous period) of Jordà et al. (2017, narrow) Note that Jordà et al. (2017, narrow) lacks data for Germany for 1914–1922 and 1939–1947. The missing observations for 1914–1922 have been imputed using the growth rates of broad for 1915–1923. The missing observations for 1939–1947 have been imputed using the average annual growth rate for 1939–1948.
broad	1870–2024	(Contribution to Euro Area) Monetary aggregate M3; EUR millions i) Since 1980: End of year observations of the following series: a) Since 1997M09: m3 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) b) 1980M01–1997M08: ia) backdated using growth rates (previous period) of Deutsche Bundesbank (2025<i>b</i>) ii) Prior to 1980: i) backdated using growth rates (previous period) of Jordà et al. (2017, money) Note that Jordà et al. (2017, money) lacks data for Germany for 1923–1924 and 1939–1947. The value for 1924 has been imputed by backdating the value for 1925 using the growth rate of narrow for 1925. The value for 1923 has been imputed by backdating the imputed value for 1924 using the growth rate of narrow for 1924. The missing observations for 1939–1947 have been imputed using the average annual growth rate for 1939–1948.

Variable	Range	Description
stir	1870–2024	Euro short-term rate; Percent i) Since 1960: Annual (simple arithmetic) averages of the following series: a) Since 1999M01: estr_1d described in Section 25 (before calculating the quarterly averages) b) 1960M01–1998M12: OECD (2025<i>b</i>) ii) Prior to 1960: Jordà et al. (2017, stir) Note that Jordà et al. (2017, stir) lacks data for Germany for 1923 and 1945–1949. The missing observations have been imputed by the (simple arithmetic) average of the data for 1922 and 1924, and 1944 and 1950, respectively.
ltir	1870–2024	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Euro; Percent i) Since 1955: Annual (simple arithmetic) averages of the following series: a) Since 1993M01: ECB Data Portal (2025<i>g</i>) b) 1956M05–1992M12: OECD (2025<i>c</i>) ii) Prior to 1955: Jordà et al. (2017, ltrate) Note that Jordà et al. (2017, ltrate) lacks data for Germany for 1922–1923 and 1944–1947. The missing observations have been imputed by the (simple arithmetic) average of the data for 1921 and 1924, and 1943 and 1948, respectively.
xr_usd	1870–2024	Exchange rate to USD; EUR per USD i) Since 1999: Annual (simple arithmetic) averages of IMF (2025<i>a</i>) for the Euro Area ii) Prior to 1999: Jordà et al. (2017, xrusd) divided by 1.95583 (fixed DEM/EUR conversion rate)

34. Ireland (IE)

Variable	Range	Description
pop	1921–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1922–2024	Nominal gross domestic product (GDP); EUR millions i) Since 1995: Eurostat (2025 <i>b</i>) ii) Prior to 1995: i) backdated using growth rates (previous period) of Jordà et al. (2017, gdp)
gdp_defl	1923–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1995: Eurostat (2025 <i>g</i>) ii) Prior to 1995: i) backdated using growth rates (previous period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1922–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100: i) Since 1997: Annual (simple arithmetic) averages of Eurostat (2025 <i>a</i>) ii) Prior to 1997: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)
ur	1960–2023	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp)

Variable	Range	Description
narrow	1920–2024	(Contribution to Euro Area) Monetary aggregate M1; EUR millions i) Since 1997: End of year observations of m1 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 1997: i) backdated using growth rates (previous period) of Jordà et al. (2017, narrow)
broad	1920–2024	(Contribution to Euro Area) Monetary aggregate M2; EUR millions i) Since 1997: End of year observations of m2 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 1997: i) backdated using growth rates (previous period) of Jordà et al. (2017, money)
stir	1920–2024	Euribor, 3-month; Percent i) Since 1984: Annual (simple arithmetic) averages of the following series: a) Since 1999M01: ECB Data Portal (2025<i>i</i>) b) 1984M01-1998M12: OECD (2025<i>a</i>) ii) Prior to 1984: Jordà et al. (2017, stir)
ltir	1922–2024	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Euro; Percent i) Since 1970: Annual (simple arithmetic) averages of the following series: a) Since 1993M01: ECB Data Portal (2025<i>g</i>) b) 1970M12-1992M12: OECD (2025<i>c</i>) ii) Prior to 1970: Jordà et al. (2017, ltrate)

Variable	Range	Description
xr_usd	1920–2024	Exchange rate to USD; EUR per USD i) Since 1999: Annual (simple arithmetic) averages of IMF (2025<i>a</i>) for the Euro Area ii) Prior to 1999: Jordà et al. (2017, xrusd) divided by 0.787564 (fixed IEP/EUR conversion rate)

35. Italy (IT)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)

40. Portugal (PT)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1870–2024	Nominal gross domestic product (GDP); EUR millions i) Since 1995: Eurostat (2025 <i>b</i>) ii) Prior to 1995: i) backdated using growth rates (previous period) of Jordà et al. (2017, gdp)
gdp_defl	1871–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1995: Eurostat (2025 <i>g</i>) ii) Prior to 1995: i) backdated using growth rates (previous period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1870–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100:

Variable	Range	Description
		i) Since 1996: Annual (simple arithmetic) averages of Eurostat (2025 <i>a</i>) ii) Prior to 1996: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)
ur	1953–2023	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp)
narrow	1870–2024	(Contribution to Euro Area) Monetary aggregate M1; EUR millions i) Since 1997: End of year observations of m1 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 1997: i) backdated using growth rates (previous period) of Jordà et al. (2017, narrow)
broad	1870–2024	(Contribution to Euro Area) Monetary aggregate M2; EUR millions i) Since 1997: End of year observations of m3 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 1997: i) backdated using growth rates (previous period) of Jordà et al. (2017, money)
stir	1880–2024	Euribor, 3-month; Percent i) Since 1985: Annual (simple arithmetic) averages of the following series: a) Since 1999M01: ECB Data Portal (2025 <i>i</i>) b) 1985M08-1998M12: OECD (2025 <i>a</i>) ii) Prior to 1985: Jordà et al. (2017, stir)

Variable	Range	Description
ltir	1870–2024	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Euro; Percent i) Since 1993: Annual (simple arithmetic) averages of ECB Data Portal (2025 <i>g</i>) ii) Prior to 1993: Jordà et al. (2017, ltrate)
xr_usd	1870–2024	Exchange rate to USD; EUR per USD i) Since 1999: Annual (simple arithmetic) averages of IMF (2025 <i>a</i>) for the Euro Area ii) Prior to 1999: Jordà et al. (2017, xrusd) divided by 200.482 (fixed PTE/EUR conversion rate)

41. Spain (ES)

Variable	Range	Description
pop	1870–2023	Population; Millions i) Since 1960: World Bank (2025) ii) Prior to 1960: i) backdated using growth rates (previous period) of Jordà et al. (2017, pop)
gdp_nom	1870–2024	Nominal gross domestic product (GDP); EUR millions i) Since 1995: Eurostat (2025 <i>b</i>) ii) Prior to 1995: i) backdated using growth rates (previous period) of Jordà et al. (2017, gdp)
gdp_defl	1871–2024	GDP deflator; 2015 = 100 This series has been constructed by dividing the following series into gdp_nom and adjusting the result such that the value for 2015 is equal to 100: i) Since 1995: Eurostat (2025 <i>g</i>) ii) Prior to 1995: i) backdated using growth rates (pre-

Variable	Range	Description
		vious period) computed from Jordà et al. (2017, rgdpbarro) and Jordà et al. (2017, pop)
cpi	1870–2024	Consumer price index (CPI); 2015 = 100 This series has been constructed by adjusting the following series such that the value for 2015 is equal to 100: i) Since 1996: Annual (simple arithmetic) averages of Eurostat (2025a) ii) Prior to 1996: i) backdated using growth rates (previous period) of Jordà et al. (2017, cpi)
ur	1933–2024	Unemployment rate; Percent i) Since 2000: ILOSTAT (2025) ii) Prior to 2000: Jordà et al. (2017, unemp) Note that Jordà et al. (2017, unemp) lacks data for Spain for 1936–1938. The missing observations have been imputed by the (simple arithmetic) average of the data for 1935 and 1939.
narrow	1874–2024	(Contribution to Euro Area) Monetary aggregate M1; EUR millions i) Since 1997: End of year observations of m1 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 1997: i) backdated using growth rates (previous period) of Jordà et al. (2017, narrow) Note that Jordà et al. (2017, narrow) lacks data for Spain for 1936–1940. The missing observations have been imputed using the average annual growth rate for 1936–1941.
broad	1874–2024	(Contribution to Euro Area) Monetary aggregate M3; EUR millions

Variable	Range	Description
		i) Since 1997: End of year observations of m3 data described in Section 26 (before being seasonally adjusted and taking the end of quarter observations) ii) Prior to 1997: i) backdated using growth rates (previous period) of Jordà et al. (2017, money) Note that Jordà et al. (2017, money) lacks data for Spain for 1936–1940. The missing observations have been imputed using the average annual growth rate for 1936–1941.
stir	1870–2024	Euro short-term rate; Percent i) Since 1973: Annual (simple arithmetic) averages of the following series: a) Since 1999M01: estr_1d described in Section 25 (before calculating the quarterly averages) b) 1973M06–1998M12: OECD (2025b) ii) Prior to 1973: Jordà et al. (2017, stir)
ltir	1870–2024	Long-term interest rate for convergence purposes – 10 years maturity, denominated in Euro; Percent i) Since 1980: Annual (simple arithmetic) averages of the following series: a) Since 1993M01: ECB Data Portal (2025g) b) 1980M01–1992M12: OECD (2025c) ii) Prior to 1980: Jordà et al. (2017, ltrate) Note that Jordà et al. (2017, ltrate) lacks data for Spain for 1937–1939. The missing observations have been imputed by the (simple arithmetic) average of the data for 1936 and 1940.
xr_usd	1870–2024	Exchange rate to USD; EUR per USD i) Since 1999: Annual (simple arithmetic) averages of IMF (2025a) for the Euro Area ii) Prior to 1999: Jordà et al. (2017, xrusd) divided by
